AI-based document
forgery detection for
fraud prevention

Valida by Gradient assesses the trustworthiness of digital documents to prevent fraud in on-boarding and KYC processes.

Our technology allows companies to offer an extra level of security and prevent fraud by analyzing documents -JPEG images and PDF files- and detecting digital forgeries through AI-based forensic techniques.

Valida

Valida allows any company to:

- ✓ Automatically detect digital forgeries in ID documents, bills, payslips, etc.
- ✓ Automatically detect whether a document has been captured from a screen display
- ✓ Support all types of ID documents and nationalities: passports, national ID documents, driving licenses, etc. without the need of adaptation nor specific training
- ✓ Not require connection to external databases (e.g. ID document databases) to detect modifications
- ✓ Not demand the original document to detect modifications
- ✓ Analyze JPEG images and PDF files

AI-based document forgery detection

Prevents fraud in onboarding and KYC processes

Supports all types of ID documents and nationalities

Does not require the original document nor external databases
